

ACTALIS ENTERPRISE PLATFORM

CENTRALIZED MANAGEMENT OF CERTIFICATES AND MPKI

What is it?

Enterprise RA is a platform which lets you issue various types of certificates in real-time, to entities requiring a practical solution for **Managed PKI (MPKI)**.

Enterprise RA can be used to request certificates and start the issuing process, using the **Certificate Signing Request (CSR)**, as well as for receiving notifications when certificates are issued, downloading certificates and much more.

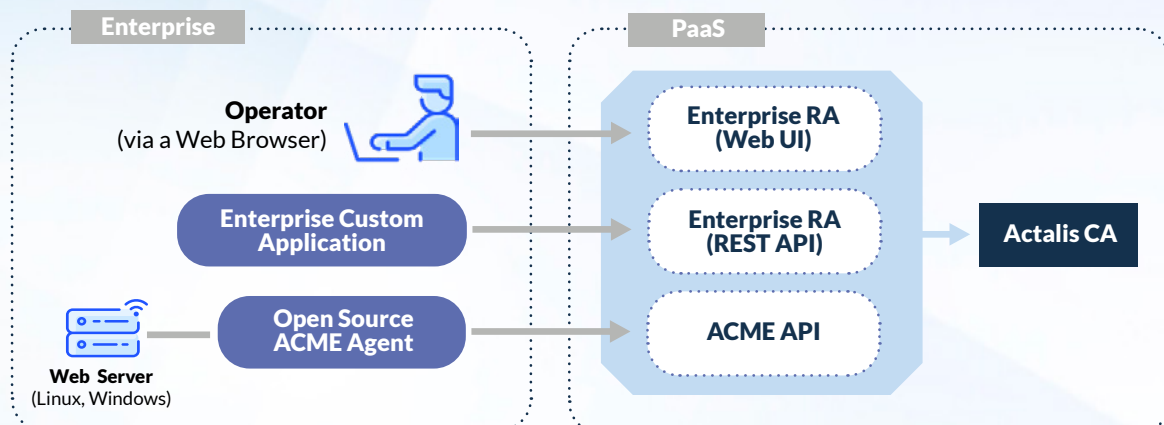

The design of Enterprise RA can be customized with **logos and custom welcome messages** to create a digital environment for exclusive company use.

TYPES OF CERTIFICATES THAT CAN BE MANAGED

-  SSL Server Certificates
-  SSL Client Certificates
-  Code Signing Certificates
-  S/MIME Certificates
(for your email domains)

Enterprise RA is easily integrated with business applications, making it possible to interact directly with the Actalis Certification Authority.

How it works

Profile

Once signed up to the service, a unique login profile is created for each client.

Access

Sign in with an individual client certificate from Actalis or by enabling 2-factor authentication (2FA).

Credit

Credit is put on each client profile to cover costs of certificates issued.

Centralized management

All certificates are managed centrally on the platform.

ACME protocol

The ACME (Automated Certificate Management Environment) protocol is also supported, enabling fully automated management of SSL certificates, including generating key pairs, domain validation, and the download, installation and renewal of certificates.

BENEFITS

- ✓ Login details provided for multiple operators, according to company requirements.
- ✓ Automatic accuracy check of Certificate Signing Request (CSR) entered by an operator.
- ✓ Notifications issued for each individual certificate issued.
- ✓ Option to download all certificates issued.
- ✓ Automatic email notification of approaching certificate expiry dates.
- ✓ Option to renew in advance without losing any days of validity

Who are Actalis

Actalis is a Certification Authority qualified according to eIDAS regulation to provide trust services and internationally recognized for issuing SSL Server certificates and the only Italian member of the CAB Forum.

In 2009, it became part of the **Aruba Group**, whose parent company is **Aruba S.p.A.**, the leading Italian provider of data center, cloud, web hosting, email and domain registration services. Today, Actalis provides important services to the Italian Central Public Administration, as well as internationally to a broad range of private companies of all sizes.

The first European Certification Authority

In over 20 years working as a Certification Authority, we have provided trust services to millions of users, becoming Europe's leading provider (source: Netcraft).
